Teodor DjorDjevic

Full Stack Software Engineer

SUMMARY

Results-driven Full Stack Software Engineer with over 8 years of experience designing, developing, and optimizing complex software systems. Expert in TypeScript, React, Python and Ruby on Rails with a proven track record of delivering scalable, high-quality solutions across various industries. Skilled in collaborating with cross-functional teams, mentoring junior developers, and driving technical innovation to meet business goals. Known for strong problem-solving skills and a passion for implementing best practices in agile environments.

EXPERIENCE

Full Stack Software Engineer

Spartoo

07/2023 - Present

Developed and maintained the core platform to support seamless online shopping experiences for users across Europe.

- Implemented **Next.js** with **TypeScript** and **Zustand** for state management, enabling efficient client-side rendering and improved application performance in handling dynamic user interfaces for product browsing and cart management.
- Built backend services using **Ruby on Rails** alongside **Active Record** and **PostgreSQL**, ensuring reliable data modeling and query optimization for inventory and user profile management.
- Integrated **WebSocket** functionality with **ActionCable** in **Ruby** to facilitate real-time updates, such as live notifications for order status changes and user interactions on the platform.
- Designed event-driven architecture incorporating **Kafka** within **Ruby on Rails** to handle asynchronous messaging, supporting scalable processing of high-volume transactions and system events.
- Maintained background job processing with **Redis** and **Sidekiq** in **Ruby on Rails**, allowing for efficient task queuing and execution in areas like email delivery and data synchronization.
- Conducted comprehensive testing using **RSpec** for backend, **Jest** for frontend, and **Cypress** for end-to-end scenarios, verifying functionality across the e-commerce workflow from user registration to checkout.

Software Engineer

Infermedica

09/2020 - 06/2023

Contributed to healthcare service by building secure and user-friendly app focused on patient diagnostics and support.

- Developed frontend and backend components with **React**, **Python**, and **Django** to deliver **HIPAA-compliant** healthcare services, prioritizing data security and compliance in patient information handling.
- Created cross-platform features using **React** and **React Native**, supporting consistent user experiences on web and mobile for accessing medical consultations and symptom checkers.
- Automated data processing tasks with **Python**, **Pandas**, and **Selenium**, enabling efficient analysis and testing of healthcare datasets without manual intervention.
- Implemented state management solutions employing **TypeScript** and **Redux**, streamlining complex application logic for features like user session tracking and dynamic form handling.
- Visualized medical data trends through **React** integrated with **Chart.js,** providing intuitive dashboards for healthcare professionals to review patient statistics and outcomes.
- Deployed applications on **AWS** with **CI/CD** pipelines and **Heroku** integration, facilitating smooth updates and scaling for healthcare tools under varying loads.

Full Stack Developer

ChooseBalkans

10/2017 - 08/2020

Supported travel platform development by creating interactive features for users planning trips and bookings.

- Built responsive user interfaces with **React** and **Tailwind CSS**, adapting layouts for various devices to enhance accessibility in browsing travel options and itineraries.
- Managed server-side logic using **Ruby on Rails** and **MySQL**, handling database operations for storing user preferences and trip details securely.
- Set up data querying with **Apollo Server** and **Client** alongside **GraphQL**, allowing flexible API interactions for fetching customized travel recommendations.
- Incorporated location-based services in **React** with **Google Maps** integration, enabling users to view interactive routes and destinations on the platform.
- Organized component libraries through **Storybook**, promoting consistent design patterns and easier collaboration among developers for UI elements.
- Coordinated version control with **Git**, tracking changes and merging contributions to maintain code integrity across the development team.

EDUCATION

Bachelor's degree of Computer Science

University of Belgrade

08/2013 - 07/2017

SKILLS

Languages

JavaScript | TypeScript | HTML | CSS | SCSS | SQL | Bash | JSON | Python | Ruby

Frontend

React | React Native | Next.js | Bootstrap | Tailwind CSS | MUI | JQuery | MapBox | Chart.js | D3.js | React Query | React Hooks | Redux | Zustand | Storybook

Backend

Ruby on Rails | Django | Flask | Pandas | Node.js | Express | MySQL | MongoDB | ActiveRecord | HotWire | ActionMailer | ActionCable | Sidekiq | Redis | Kafka | GraphQL | FastAPI | Websockets

Others

Rspec | Pytest | Jest | Cypress | Postman | Swagger | Selenium | ESLint | Vite | Webpack | Git | AWS | GCP | Docker | CI/CD | Jenkins | Puma | Heroku | Vercel
